# iPath:Imaging for SharePoint

Enterprise Document Imaging Solution for SharePoint

Organizations continue to be faced with a large volume of paper documents that need to be processed and managed in the course of doing daily business. By transforming these paper documents into electronic formats within the organization's content management solution, significant benefits can be realized including reduced business operating costs, optimization of the decision-making process, enhanced customer service and employee productivity, and enhanced information governance.

NteliPath's document imaging product suite, iPath:Imaging, extends and enhances the out-of-the-box MOSS 2007 and SharePoint 2010 capabilities by providing comprehensive image management and storage services, on-demand document scanning, advanced document viewing with comprehensive annotation capabilities, and document conversion capabilities including TIFF to searchable PDF, from within intranet and internet environments.

Transform paper documents into electronic formats and realize significant benefits

Product Highlights

- SharePoint 2010, WSS or MOSS 2007 support
- On-demand and web-based scanning into SharePoint document libraries
- Document image viewer with comprehensive annotation and redaction capabilities
- Universal viewer that supports 300+ document formats including MS-Office, CAD, PDF, etc.
- Highly scalable storage extensions relieve the burden of storing large binary objects in SQL
- Seamless integration with NteliPath's high volume capture solution iPath:Capture

NteliPath and SharePoint

A Winning Combination …

Features

Capture

- Captures image pages from scanning sources or file system and groups them into documents.
- Supports virtually all scanning sources through TWAIN and/or Kofax drivers.
- Optional high-volume and batch scanning with comprehensive document separation capabilities.

Indexing

- Allows you to assign SharePoint content types and enter metadata for scanned documents.
- Automatic indexing of scanned batches (bar codes, Zone OCR, database lookups, etc.).

Filing

- Files scanned documents and metadata to folders and document libraries in SharePoint.
- Supports filing documents directly to external repositories using NteliPath Storage Extensions.

OCR Option

- Converts scanned images to searchable PDFs.
- Enables full-text search of scanned images.
- Recognizes over 100 languages plus banking fonts.

Storage Extensions for SharePoint

- Intelligent content integration that exposes content stored externally to the ECM controls of SharePoint.
- A highly scalable content repository that seamlessly connects to SharePoint.
- Relieves the burden of storing large binary objects (BLOBS) in SQL.

Viewing

- Image viewing through client or web viewers.
- Web viewer provides image viewing with no need to install on client workstations.

Universal Viewing Option

- Optional web based Universal Viewer.
- Supports 300+ document formats including TIFF, JPEG, MS-Office, CAD, and PDF.
- Comprehensive annotation capabilities on all document formats, with full access controls .

Searching

- Provides advanced search capabilities on content stored in SharePoint and external repositories using iPath:Search for metadata and full-text search.
